

# Utilities

## Homepage App

This is a homepage and can be reached at <http://10.100.100.25>. It is handy for seeing and accessing the apps configured on the various servers.

Homepage is self hosted on the [Docker server](#)

## Speedtest Tracker

This site can be accessed by going to <http://10.100.100.25:8080/>. It does a speedtest every 30 minutes and displays it both on the web page and on the Homepage app.

## AdGuard Home

AdGuard is an internal DNS server that blocks ads on devices that are pointed to it for DNS resolution. It can be reached at <http://10.100.100.24/>. If it were to go down, then you would need to change the DNS on the DHCP server. Currently, that server is our file server at 10.100.100.15. Adam A. should be able to get you instructions on changing the DNS server on the DHCP pool.

## Unifi Controller

The Unifi controller is what is used to configure the wifi access points when changes need made. Once the APs have their config, the controller is not needed. If this were to die, the wifi would probable continue to work, but no changes could be made. If
