

# General info

There are two Hubitat Hubs. One is a C8 Pro on my desk and one is a C7 in the furnace room in Mike's garage. Both are powered by USB. The C8 Pro is USB-C and the C7 is Micro-USB

The C8 Pro is "home" to most of the devices and rules than run the smart devices around. It is also attached to Home Assistant through a Make API app called Home assistant. you can access that app [HERE](#). Please see the [Hubitat Rules](#) chapter for configuration info.

The C7 has a couple of devices on it but it is primarily for the Zigbee "911" buttons throughtout Mike's House. Those rules are on the C8 Pro hub and can be found [HERE](#), [HERE](#), and [HERE](#).

The two hubs are connected together through the built in Hub Mesh application. This app allows sharing of devices between hubs. [Hub Mesh Link](#)

Both hubs will look similar to this. The C8 Pro has external antennas.
